DESIGN NOTES

Look for the decisions behind the screens

A practical portfolio conversation

Rupesh Kumar

DESIGN NOTES

Begin with the original task

01 Who needed help, and what were they trying to do?

02 What evidence shaped the problem statement?

03 What was the designer personally responsible for?

Ask about the constraints

01 What could the team change at that stage?

02 What did time, technology or policy make difficult?

03 Which constraint most affected the design?

Compare the options

01 What other approaches did the team consider?

02 Why was this approach chosen?

03 Which trade-off remained in the final work?

Understand the collaboration

01 Who disagreed, and what was the disagreement about?

02 How did engineering or product input change the work?

03 Who made the final decision?

Examine the evidence afterward

01 What did the team observe after trying the design?

02 Which results are recorded, and which are impressions?

03 What cannot reasonably be attributed to this work?

Ask what they would revisit

01 What question remains unanswered?

02 What would they check before reusing the approach?

03 What does that reveal about how they make decisions?
