Follow one task across the company

A review of the information that changes between marketing, product and support.

HYPOTHETICAL EXAMPLE

BEFORE SIGNUP

What can I expect and commit to?

Inspect the claim, access, cost and setup requirements.

→

INSIDE THE PRODUCT

What do I do next?

Follow the first report and its explanation.

→

WHEN IT FAILS

What context must I repeat?

Inspect support access and ownership of the unresolved task.

Trace the same promise through each handoff.

Hypothetical task: a customer wants to replace a reporting process with a new tool.

01

BEFORE SIGNUP

What can I expect and commit to?

Inspect the claim, access, cost and setup requirements.

↓

02

INSIDE THE PRODUCT

What do I do next?

Follow the first report and its explanation.

↓

03

WHEN IT FAILS

What context must I repeat?

Inspect support access and ownership of the unresolved task.

Look for lost context and conflicting rules.

A handoff problem may live in policy, data or ownership. A new screen can only help when that cause is understood.

Gap	Example	Decision needed
Changed expectation	The setup requirement appears after signup.	Where should the condition be stated?
Repeated context	Support asks for information already provided.	What context can transfer safely?
Conflicting rule	The website and product describe different limits.	Which source owns the rule?
No owner	The customer is sent between teams.	Who owns the whole unresolved task?

Choose the smallest complete response.

A complete response covers the customer question through the handoff. Changing one message may leave the cause in place.

MESSAGE CHANGE

Clarify the setup requirement

Useful when the process is deliberate and the information is missing.

OPERATIONAL CHANGE

Give support the necessary context

Useful when the customer must repeat work because teams cannot see it.

Give the gap a shared owner.

The review should leave one person accountable for coordinating the response, even if several teams contribute.

Customer task and gap

Where does the explanation or ownership break?

Cause and proposed response

Which information, rule or process needs to change?

Owner and inspection point

Who will review the whole task after the change?
