Read the decision behind the portfolio

A review lens for ownership, alternatives and the limits of the result.

SITUATION

What needed deciding?

Task, constraint, stakes and plausible alternatives.

→

CHOICE

Why this response?

State the evidence and judgement used.

→

AFTERWARD

What did you learn?

Include the result and its limits.

Choose one consequential decision.

Ask for a choice that changed the direction of the work. Leave time to discuss the option the team did not choose.

01

SITUATION

What needed deciding?

Task, constraint, stakes and plausible alternatives.

↓

02

CHOICE

Why this response?

State the evidence and judgement used.

↓

03

AFTERWARD

What did you learn?

Include the result and its limits.

Separate authorship from team output.

Specific credit makes the reasoning easier to assess. Collaboration should not have to disappear to make a case study sound strong.

Ask	Look for
Which decision did you own?	A clear scope of responsibility.
Who changed your thinking?	A specific contribution and its effect.
What was already decided?	An honest account of constraints.
What would you revisit?	A reason grounded in later evidence.

Check whether the result supports the claim.

A shipped screen proves the team shipped a screen. A task test and a business outcome answer different questions.

SUPPORTED CLAIM

People could locate the plan limit in the test

State the task, test conditions and remaining uncertainty.

UNSUPPORTED EXTENSION

The new comparison increased revenue

Requires separate evidence that can support that conclusion.

Leave room for judgement under uncertainty.

A good answer may explain why the team acted with incomplete evidence, how it limited the risk and what it planned to check next.

Decision worth examining

What did they choose, and what did it affect?

Evidence and limits

What could the team know at the time?

Next question

What would you need to understand their judgement?
